Toner composition for electrophotography and electrostatic recording -  
includes binder contg. polymeric substance having sulphonate Gp. linked  
with aromatic ring

Patent Assignee: FUJI XEROX CO LTD (XERF )

Number of Countries: 001 Number of Patents: 001

Abstract (Basic): JP 63088564 A

The compsn. comprises colouring agent and binder resin, which  
contains polymeric substance having sulphonate gp. linked with aromatic  
ring.

USE/ADVANTAGE - The toner is used for electrophotography,  
electrostatic recording etc., and can be used two component development  
process utilising carrier and also one component process utilising no  
carrier. Toner has good negative charging, developing and transfer  
properties. An adequate charging level is achieved within short time.  
Charging quantity is regulated sharply.

In an example, in pts. wt., styrene/n-butylacrylate copolymer (Tg  
= 65 deg.C, Mn = 30,000, Mw = 70,000) 60,  
styrene/Na-vinyl-benzenesulphonate copolymer (Na-vinylbenzenesulphonate  
content = 3 mol%, Mn = 7,000, Mw = 10,000) 30 and carbon black 10 were  
mixed and ground thoroughly to obtain toner with particle size of d50 =  
13 micron. To the toner were added silica fine powder 0.7 wt.% and  
acrylic resin fine powder obtd. soapless emulsion polymerisation by 0.8  
wt.% and mixed together. In combination with carrier, the toner mixt.  
prepd. was tested for developing property. 30,000 xerographic copies  
obtd. by continuous operation were all clear.

Title Terms: TONER; COMPOSITION; ELECTROPHOTOGRAPHIC; ELECTROSTATIC; RECORD  
; BIND; CONTAIN; POLYMERISE; SUBSTANCE; SULPHONATE; GROUP; LINK; AROMATIC  
; RING
